Experiment -8

Student Name: Vansh UID:22BCS15580

Branch: BE-CSE Section/Group:IOT NTPP 603-

B

Semester:6th Date of Performance:17/03/2025

Subject Name: Project-Based Learning in Subject Code: 22CSH-359

Java with Lab

7.1.1.Aim: To develop a servlet that accepts user credentials from an HTML form and displays a personalized welcome message on successful login.

7.1.2 Objective: Learn form handling with Servlets

Understand HTTP request/response handling

Practice doPost() method

7.1.3 Code:

```
<!DOCTYPE html>
<html>
<head><title>Login</title></head>
<body>
 <form action="LoginServlet" method="post">
  Username: <input type="text" name="username"><br>
  Password: <input type="password" name="password"><br>
  <input type="submit" value="Login">
 </form>
</body>
</html>
import java.io.*; import
javax.servlet.*;
import javax.servlet.http.*;
public class LoginServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response)
throws ServletException, IOException {
                                           String user =
request.getParameter("username");
     String pass = request.getParameter("password");
```

```
response.setContentType("text/html");
PrintWriter out = response.getWriter();
    if ("admin".equals(user) && "1234".equals(pass)) {
       out.println("<h2>Welcome, " + user + "!</h2>");
    } else {
       out.println("<h2>Login Failed. Invalid credentials.</h2>");
  }
<web-app>
 <servlet>
  <servlet-name>LoginServlet</servlet-name>
  <servlet-class>LoginServlet/servlet-class>
 </servlet>
 <servlet-mapping>
  <servlet-name>LoginServlet</servlet-name>
  <url>pattern>/LoginServlet</url-pattern></url
 </servlet-mapping>
</web-app>
```

Output:

- 1) On correct login: Welcome, Sarthak!
- 2) On failure: Login Failed. Invalid credentials.
- **7.2.1 Aim:** To build a servlet integrated with JDBC that displays all employees and enables search by employee ID.

Objective: 1) Use JDBC with Servlet 2)

Fetch and display records

3) Implement search functionality

7.2.2 Code:

```
<html>
<head><title>Search Employee</title></head>
<body>
 <form action="EmployeeServlet" method="post">
  Enter Employee ID: <input type="text" name="empId">
  <input type="submit" value="Search">
 </form>
</body>
</html>
import java.io.*; import
javax.servlet.*; import
javax.servlet.http.*; import
java.sql.*;
public class EmployeeServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response)
throws ServletException, IOException {
     String empId = request.getParameter("empId");
response.setContentType("text/html");
PrintWriter out = response.getWriter();
    try {
       Class.forName("com.mysql.jdbc.Driver");
       Connection con =
DriverManager.getConnection("idbc:mysql://localhost:3306/company", "root", "password");
       String query = "SELECT * FROM employees WHERE emp id=?";
       PreparedStatement ps = con.prepareStatement(query);
       ps.setString(1, empId);
ResultSet rs = ps.executeQuery();
       if (rs.next()) {
         out.println("<h2>Employee Details</h2>");
out.println("ID: " + rs.getInt(1) + " < br > ");
out.println("Name: " + rs.getString(2) + "<br/>');
out.println("Department: " + rs.getString(3));
```

```
} else {
     out.println("No employee found with ID " + empId);
}

con.close();  }
catch (Exception e) {
    out.println("Error: " + e.getMessage());
}
}
```

- 1) Enter an employee ID \rightarrow Shows details if found.
- 2) Not found \rightarrow "No employee found with ID X
- **7.3.1 Aim:** To develop a JSP-based student portal that accepts attendance data and saves it to the database using a servlet.

Objective: 1) Combine JSP for UI and Servlets for logic

- 2) Perform INSERT using JDBC
- 3) Build a real-world web flow

```
Code:
```

7.2.3 Output:

```
<option>Absent
  </select><br>
  <input type="submit" value="Submit">
 </form>
</body>
</html>
import java.io.*; import
javax.servlet.*; import
javax.servlet.http.*; import
java.sql.*;
public class AttendanceServlet extends HttpServlet {
  protected void doPost(HttpServletRequest request, HttpServletResponse response)
throws ServletException, IOException {
                                           String roll =
request.getParameter("roll");
    String name = request.getParameter("name");
    String status = request.getParameter("status");
    response.setContentType("text/html");
    PrintWriter out = response.getWriter();
    try {
      Class.forName("com.mysql.jdbc.Driver");
      Connection con =
DriverManager.getConnection("jdbc:mysql://localhost:3306/student portal", "root",
"password");
      String query = "INSERT INTO attendance (roll_no, name, status) VALUES (?, ?,
?)";
      PreparedStatement ps = con.prepareStatement(query);
                          ps.setString(2, name);
ps.setString(1, roll);
      ps.setString(3, status);
      int i = ps.executeUpdate();
if (i > 0) {
         out.println("<h3>Attendance marked successfully for " + name + "!</h3>");
      }
```

```
con.close();
} catch (Exception e) {
    out.println("Error: " + e.getMessage());
}

CREATE TABLE attendance (
    id INT AUTO_INCREMENT PRIMARY KEY,
    roll_no VARCHAR(20),
name VARCHAR(100),
    status VARCHAR(10)
);
OUTPUT
```

Form submission \rightarrow "Attendance marked successfully for John!" And the data is stored in the database.
